I claim:

1. A website service method comprising the steps of:

(a) setting a specific demand event to be searched at one's own server, and inputting one or more website addresses or BBS addresses;

5 (b) a searching program of said server actively collecting related data and storing the data into a database;

(c) said server analyzing the data and picking out communication information of supplier and demander;

(d) actively informing the supplier and the demander of the address and 10 service items of said website to invite them to enter said website;

(e) the supplier and the demander connecting to the Internet to enter said website after being informed;

(f) the supplier and the demander performing registering, and inputting article data or demand conditions;

15 (g) said website performing relational mating of supply and demand and displaying the mating result; and

(h) the supplier and the demander contacting each other through data provided by said database to accomplish supply and demand when their requirements are met, and said website being informed to delete this piece of 20 article data and/or demand conditions.

2. The website service method as claimed in claim 1, wherein said website addresses in said Step (a) can be WWW addresses or related server addresses.

3. The website service method as claimed in claim 1, wherein said website

9

addresses or said BBS addresses can be appended.

4. The website service method as claimed in claim 1, wherein the communication information in said Step (c) can be email addresses, telephone numbers, or fax data.

5. The website service method as claimed in claim 1, wherein the way of actively informing the supplier and the demander in said Step (d) can be sending emails via an email server, or informing via voicemail or fax.

6. The website service method as claimed in claim 1, wherein if the requirements of the supplier and the demander are not met in said Step (h), said website will send electronic newspapers, emails, ICQ messages, voicemails, or faxes to inform the supplier and the demander of required information.
